

STRIP CEMENT 100

FIELDS OF USE

STRIP CEMENT 100 is used in the field of civil constructions, to eliminate lime and cement and the various stains that make it difficult to clean bricks, stone and masonry.

ADVANTAGES

- Twice as effective

STRIP CEMENT 100 is twice as effective as crude muriatic acid, and has double its power to penetrate deeply into the pores to completely eliminate dirt. It contains K-22: this agent expressly formulated to act as an inhibitor and penetrant, reduces vanadium stains, accelerates the breakdown of insoluble salts for faster cleaning and helps to delay the evaporation of the product to avoid the formation of streaks .

- Cheap

STRIP CEMENT 100 is effective when diluted with up to 10 parts of water (depending on the amount of encrustations). Its exceptional cleaning power saves on cleaning and labor costs.

- Sure

If used according to instructions, STRIP CEMENT 100, unlike other agents, of the acid type, it will not "attack" the metal. It can be used to clean trucks, equipment, scaffolding, etc.

RECOMMENDATIONS FOR USE

General Instructions:

Read carefully all the instructions and warnings before using STRIP CEMENT 100. Protect all non-masonry surfaces with a coating of COVERING against any splashes or spills of STRIP CEMENT 100. For all types of masonry, bricks, concrete panels or stone, dilute one part of STRIP CEMENT 100 with six parts of water. Use only buckets of plastic.

Before proceeding with the treatment, always carry out a test on the surface to be treated and adjust the concentration accordingly.

Detailed Instructions:

1. Masonry - For best results, wet all masonry surfaces with water before treatment. Freely apply the STRIP CEMENT 100 solution with a bristle brush, covering an adequate portion of the surface at a time. Allow the product to absorb for several minutes and brush or scrape off the excess lime. If necessary, repeat the application. Rinse thoroughly with water.
N.B. If some types of bricks contain metal salts, which with this product cause the formation of brown or green stains, consult your CITITALIA agent for specific advice.
2. Cleaning of tools - To clean shovels, marre, trowels, etc. dilute one part of STRIP CEMENT 100 with four parts of water and immerse the tools in the solution thus obtained leaving them there until they are clean. Then rinse well and dry. The K-22 inhibitor will protect metal tools.
3. Cleaning and etching of old cement - Dilute STRIP CEMENT 100 with 10 parts of water and wet the surface to be treated abundantly with this solution. Scrub with a mason's brush and rinse off dirt, grease and stratified accumulations of food. Do not use on aluminum, magnesium, zinc (and galvanized) or stainless steel.

FEATURES -51A65

Appearance - Clear liquid.

Flammability - Non-flammable.

Toxicity - Toxic if swallowed. Irritating.

Type - Acidic concentrated detergent for the elimination of lime and cement.

Color - From amber to brown.

Odor - Aromatic.

Composition - A mixture of chelating acids, with the addition of special inhibitors and penetrating agents.
